Re: Island Perimeter Security System

Dear Resident:

At the September 8th, 2020 Council meeting, the Village Council approved a contract with Integrated Security Systems (“ISS”) for the design and installation of a new state of the art security detection system for the entire perimeter of the Island as well as the entrance into the Village.

The new system includes a combination of radars and cameras at several locations around the Island and will detect any intrusion from the waterside of the Island, day or night, under any type of weather condition. The actual installation is expected to commence early 2021.

Over the next several weeks, ISS will be doing preliminary work in the field, including assessing the integrity of seawalls at several locations including lots where the homeowners have graciously agreed to allow for the camera and radar equipment to be mounted.

I have enclosed some graphics and textual material explaining the new system. If you have any questions or would like additional information, please contact me.

Very truly yours,

Jennifer Medina
Village Manager

Enclosures

ISLAND PERIMETER SECURITY DETECTION SYSTEM

HOW IT WORKS

This newly installed integrated security system will quickly identify water borne activities and alert Village Public Safety officials by transmitting the live thermal video coverage.

The system will utilize eight (8) equipment locations along the island's perimeter comprised of radar and thermal cameras mounted on posts.

The foundation of the system will integrate all underlying existing security systems (solarbeam & video) for the fastest detection of threats or incidents enabling the most efficient emergency response.

STAYING INFORMED

Project Progress Updates will be disseminated regularly by email.

To schedule a briefing to learn more about the project: E-mail: rivera@icvps.org Or Contact: Jennifer Medina, Village Manager, at jmedina@icvps.org or 305-989-8560.
